Hi,

My name is Adam Batstone

Im a front-end developer with a passion for creating accessible, user-friendly web applications that meet Web Content Accessibility Guidelines (WCAG). My skills include HTML5, CSS, JavaScript, and React. I believe I would be a great fit for the available Front-end Developer role at Arksum Results!

Prior to diving into the world of web development, I completed my Doctorate of Musical Arts degree at the University of Toronto, where I conducted my own independent research on the relationship between creativity and communication. My journey from classical music to web development has allowed me to express my passion for creativity and education in new and exciting ways, which is evident in the many web applications I have created. I am a self-motivated, focused, hard working individual who loves to collaborate and share ideas. I believe I would be a great fit for this position, and a fantastic personality to help bring the most modern approach to web design to your team.

Together with my background in music, the technical skills I have gained give me a unique perspective that makes me a great developer. My attention to detail and overall passion for learning enable me to thrive in fast paced environments. As well, my years of teaching experience have afforded me the opportunity to collaborate with an extremely diverse group of students, all while refining my problem solving and communication skills in both group and one-on-one settings. I think I would be a great fit for the Front-end Developer position.

You can view my work at my Portfolio, or my Github. Please feel free to reach out and schedule a meeting.

I am looking forward to connecting with you!

Thanks!

Adam Batstone, DMA
